

# **SUPPORTING THE WATER INDUSTRY**

### WHAT WAS THE PROBLEM?

### **GOAL**

- » Build **financial and managerial capacity** among small water systems owners and operators so that:
  - Water system owners and operators make informed decisions
  - Health risks to small water system users are reduced

### **OUTCOMES**

- » Establish an ongoing structure to deliver information and resources to small water systems.
- » Seed a "culture change" among small water system owners and their users.

### **CONTRIBUTORS**

- Small Water Users Association of BC
- Lidstone & Company
- Res'eau WaterNet

## **TODAY'S PRESENTATION**

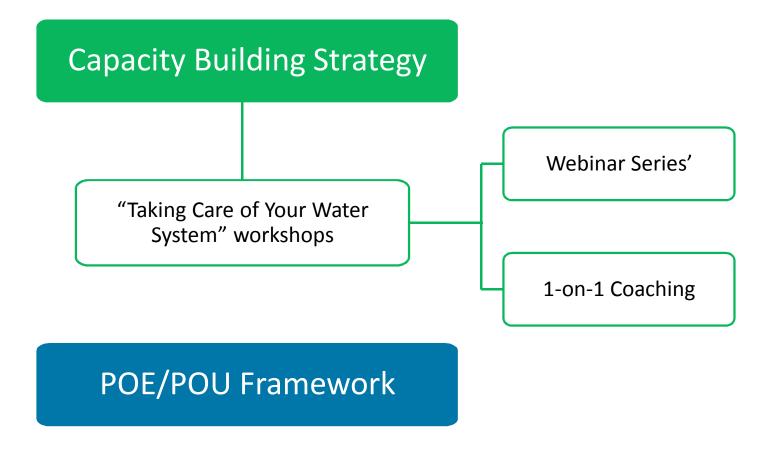

- **» GOAL & OUTCOMES**
- **» PROJECT COMPONENTS**
- » CAPACITY TRENDS & WORKSHOP OUTCOMES
- » FINDINGS & SUCCESSES

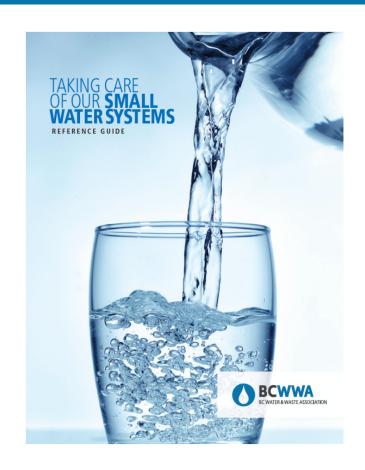

# **PROJECT COMPONENTS**

### "TAKING CARE OF YOUR WATER SYSTEM" WORKSHOPS

- » Introduce owners to their responsibilities and risks
- » Help owners self-assess potential areas of risk
- » Provide tools and resources to address risks

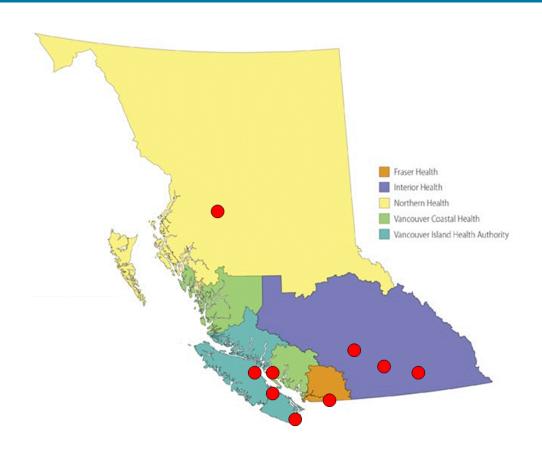

# **SELF-ASSESSMENTS**

Page 1

|     | COMPONENT   | DESIRED OUTCOME  | А   | ADEQUACY ASSESSMENT RATING |             |  |           |                |                 | PRIORITY               |  |
|-----|---|--|---|----------------------------|-------------|--|-----------|----------------|-----------------|------------------------|--|
|     | TECHNICAL CAPACITY  | <u>Technical Capacity</u> : Physical ability of a water system to meet regulatory requirements and customer satisfaction,<br>including the adequacy of physical infrastructure (e.g., treatment, distribution, and facilities), and the adequacy of<br>the source water.   | 0<br>Don't Know   | 1<br>Very Poor             | 2<br>Poor   | 3<br>Fair  | 4<br>Good | 5<br>Very Good | Input<br>Number | Rating<br>(A, B, C, D) |  |
| (A) | Source Protection   | Source is adequately protected from contamination  | ( )   | ( )                        | ( )         | ( )  | ( )       | ( )            | [ ]             | [ ]                    |  |
| (B) | Source Quantity   | Have sufficient quantity to meet current & future demands (Average day, Peak day, Fire flow )  | ()  | ()                         | ()          | ()   | ( )       | ()             | [ ]             | [ ]                    |  |
| (C) | Source Quality  | Best available water quality source being used - one with limited treatment challenges. (VG = source with no health related parameters of concern ; VP = source with many health related parameters of concern)  | ()  | ()                         | ()          | ()   | ( )       | ( )            | [ ]             | [ ]                    |  |
| (D) | Treatment Infrastructure                                  | Treatment in place that removes and/or neutralize hazards, that is in good condition & has not exceeded its useful<br>life. (Need in place chemical conditioning, filtration & disinfection barriers are appropriate for both health & non-<br>health related parameters).   | ( )   | ()                         | ()          | ( )  | ( )       | ()             | [ ]             | [ ]                    |  |
| (E) | Distribution Infrastructure                               | Distribution system (piping, pumping & storage ) that is: (1) in good condition, (2) has not exceeded its useful life, (3) prevents recontamination & water quality degradation after treatment, and (4) delivers sufficient water quantity and pressure. (i.e. Desire: stable water quality & pressure; backflow & cross contamination prevention means & safeguards; minimal water loss)                     | ( )   | ( )                        | ()          | ( )  | ( )       | ( )            | [ ]             | [ ]                    |  |
| (F) | Alarming & Security Devices.                              | Real time pressure, level & water quality monitoring & illegal entry alarming  | ()  | ()                         | ( )         | ( )  | ( )       | ( )            | [ ]             | [ ]                    |  |
| Г   |   | •  | (G) Point Total (out of 30 maximum possible )  (H) Percentage Tally = (Point Total / 30) X 100% |                            |             |  |           |                |                 |                        |  |
| Н   |   | Operational Canacity Operational and maintenance management ability of a water custom to meet regulatory   | (H) Percer  | itage Tally                | = (Point To | tal / 30) X :                                    | 100%      | _              |                 |                        |  |
|     | OPERATIONAL CAPACITY                                      | Operational Capacity: Operational and maintenance management ability of a water system to meet regulatory<br>requirements including knowledge and capability of personnel, routine aspects of system operation (e.g., testing,<br>monitoring, and routine maintenance adequacy), and procedures in place to allow consistent and safe operation of<br>the system and ability to handle non-routine situations. | 0<br>Don't Know   | 1<br>Very Poor             | 2<br>Poor   | 3<br>Pair  | 4<br>Good | 5<br>Very Good | Input<br>Number | Rating<br>(A, B, C, D) |  |
| (A) | Operating Staff   | Have operators with appropriate knowledge, skills & training to operate the system. (I= Volunteer with No training;<br>2= Volunteer with some Training 3= Trained volunteer with DRC oversight by Certified Operator, 4= Have DRC certified operator - part time availability, 5 - Have DRC certified operator - full time availability.   | ()  | ()                         | ()          | ( )  | ( )       | ()             | [ ]             | [ ]                    |  |
| (B) | Water testing & Monitoring                                | Water quality testing & monitoring in accordance with regulatory requirements & best practices   | ()  | ()                         | ()          | ()   | ( )       | ( )            |                 |                        |  |
| (C) | Data Recording and Logging                                | Detailed monitoring & recording of operating conditions (water quality, daily production, repairs or maintenance<br>undertaken, chemical usage, storage tank levels, water pressure, pump run hours, instrumentation readings,<br>customer complaints)   | ( )   | ()                         | ()          | ( )  | ( )       | ( )            | [ ]             | [ ]                    |  |
| (D) | Routine checks, adjustments,<br>maintenance & calibration | Thorough checks to assess condition & ensure system is operating properly. Make operational adjustments as<br>needed to ensure effective operation. Maintain inventories (treatment chemicals, testing equipment supplies etc.).<br>Inspect clean, maintain, calibrate and adjust chemical feed equipment and instrumentation as needed.   | ()  | ()                         | ()          | ()   | ( )       | ()             | [ ]             | [ ]                    |  |
| (E) | Facility Maintenance                                      | Facilities & grounds kept clean and equipment accessibility maintained at all times  | ()  | ()                         | ()          | ()   | ( )       | ( )            | [ ]             | [ ]                    |  |
| (F) | On-going Training   | Receive ongoing up-to-date training to stay current on regulations, standards and best practices   | ()  | ()                         | ()          | ()   | ()        | ()             | [ ]             | [ ]                    |  |
| Г   |   | <u> </u>   | (G) Point Total (out of 30 maximum possible )   |                            |             |  |           |                |                 |                        |  |
|     |   |  |   |                            |             | (H) Percentage Tally = (Point Total / 30) X 100% |           |                |                 |                        |  |

### **TREATMENT & USE OF OPERATORS**

### **WEBINARS**

- » Regulations and Guidelines for Small Water Systems in British Columbia
  - 4 videos
- » Financial Best Management Practices
  - 8 videos

# 1-ON-1 COACHING

99 small water systems

15 coaching applications

coaching candidates

**6** systems receive on-site coaching

# **POE/POU RESOURCES**

- » POE/POU Guide
- » Term Sheet describes and considers:
  - Roles and responsibilities of the parties;
  - Legal requirements of the *Drinking Water Protection Act*; and
  - Liability risks of the parties.

## **TODAY'S PRESENTATION**

- **» GOAL & OUTCOMES**
- **» PROJECT COMPONENTS**
- » CAPACITY TRENDS & WORKSHOP OUTCOMES
- » FINDINGS & SUCCESSES

#### **CAPACITY TRENDS**

### **Operational**

#### **Financial**

- Incomplete asset inventories
- Lack of long-term financial planning
- Rate structures don't cover future expenses
- Inadequate fiscal management tools

#### Managerial

- Lack of standard, documented procedures
- Poor linkages with community re: system improvements

#### **Technical**

- Inadequate treatment infrastructure
- Lack of security and real-time monitoring equipment

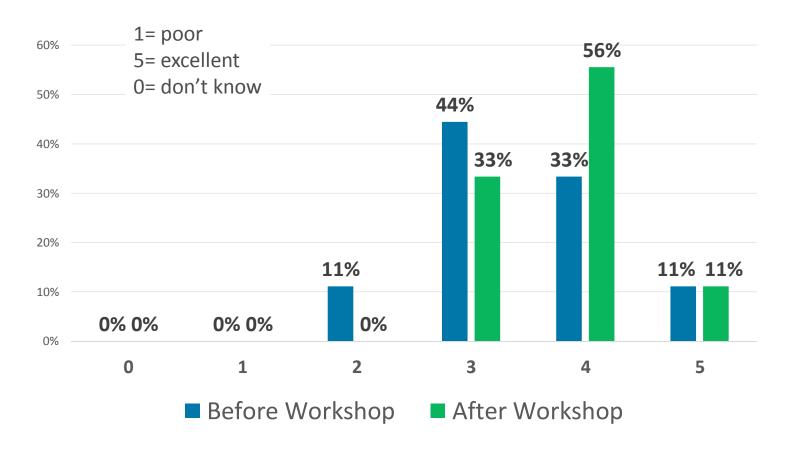

#### **WORKSHOP OUTCOMES**

- » Added a monitoring log book and moved paid operator from parttime to full-time
- » Hired a contractor to develop asset inventory list and capital improvement plan
- » Began drafting instructions for daily maintenance procedures
- » Logged water quality data and piloted **UV treatment** system

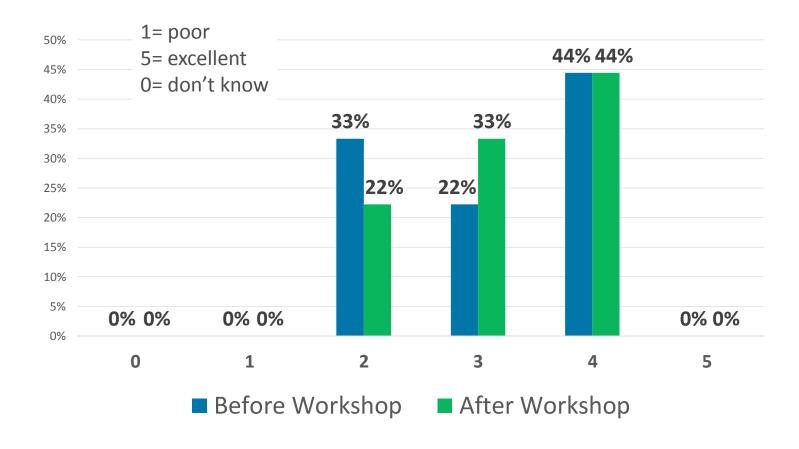

## **CHANGE IN OPERATIONAL CAPACITY**

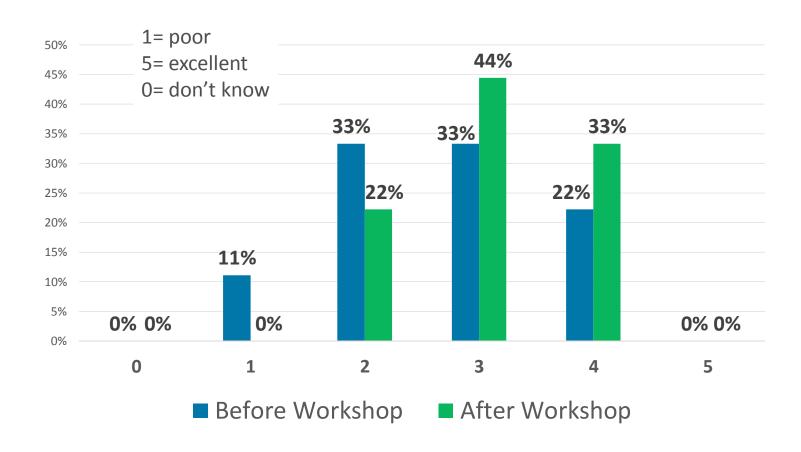

### **CHANGE IN MANAGERIAL CAPACITY**

### **CHANGE IN FINANCIAL CAPACITY**

## **TODAY'S PRESENTATION**

- **» GOAL & OUTCOMES**
- **» PROJECT COMPONENTS**
- » CAPACITY TRENDS & WORKSHOP OUTCOMES
- » FINDINGS & SUCCESSES

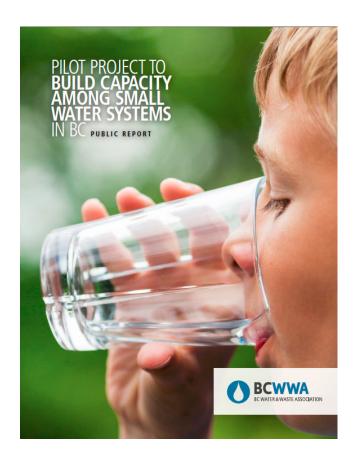

#### **AREAS OF VULNERABILITY**

- » Majority have inadequate or no centralized treatment
- » Automate and improve alarming and security
- » Document processes and procedures
- » Poor communication with users in areas requiring increase in water rates
- » Lack of asset management plan

### **KEY SUCCESSES**

- » Support Networks
- » Understanding Responsibility
- » Access to Insurance

#### **PROJECT EXTENSION**

» Small water system owners make informed decisions about the long-term management and sustainability of their system

#### AND

» Small water system owners and operators **improve** the financial, operational, technical, and managerial **capacity** of their system

#### SO THAT:

 Safe, cost-effective and sustainable water services are provided to residents/users in BC

## **Carlie Hucul**
